What is DMR

- ✦ An ETSI published world-wide standard
- ✦ TDMA: Time Division Multiple Access
- ✦ AMBE+2 codec
- ✦ Supports data applications (txt, email, gps)

Why DMR?

- ✦ Commercial radio industry standard
- ✦ Open standard
- ✦ Spectrally efficient
- ✦ Improved codec / high tolerance of bit errors
- ✦ Wide support by many radio vendors
- ✦ Two repeaters in one!

DMR Tiers

▪ Tier 1

- 1-slot TDMA
- Simplex radio to radio only

▪ Tier 2

- 2-slot TDMA
- Repeater or simplex
- IP site Connect

▪ Tier 3

- 2 - Slot TDMA
- Multi-Channel, Multi-Site
- Trunking

Two Channels - One Frequency

Each TDMA cycle is 60ms long, containing two 30ms time slots

Traditional Analog
25 kHz
Channel Bandwidth

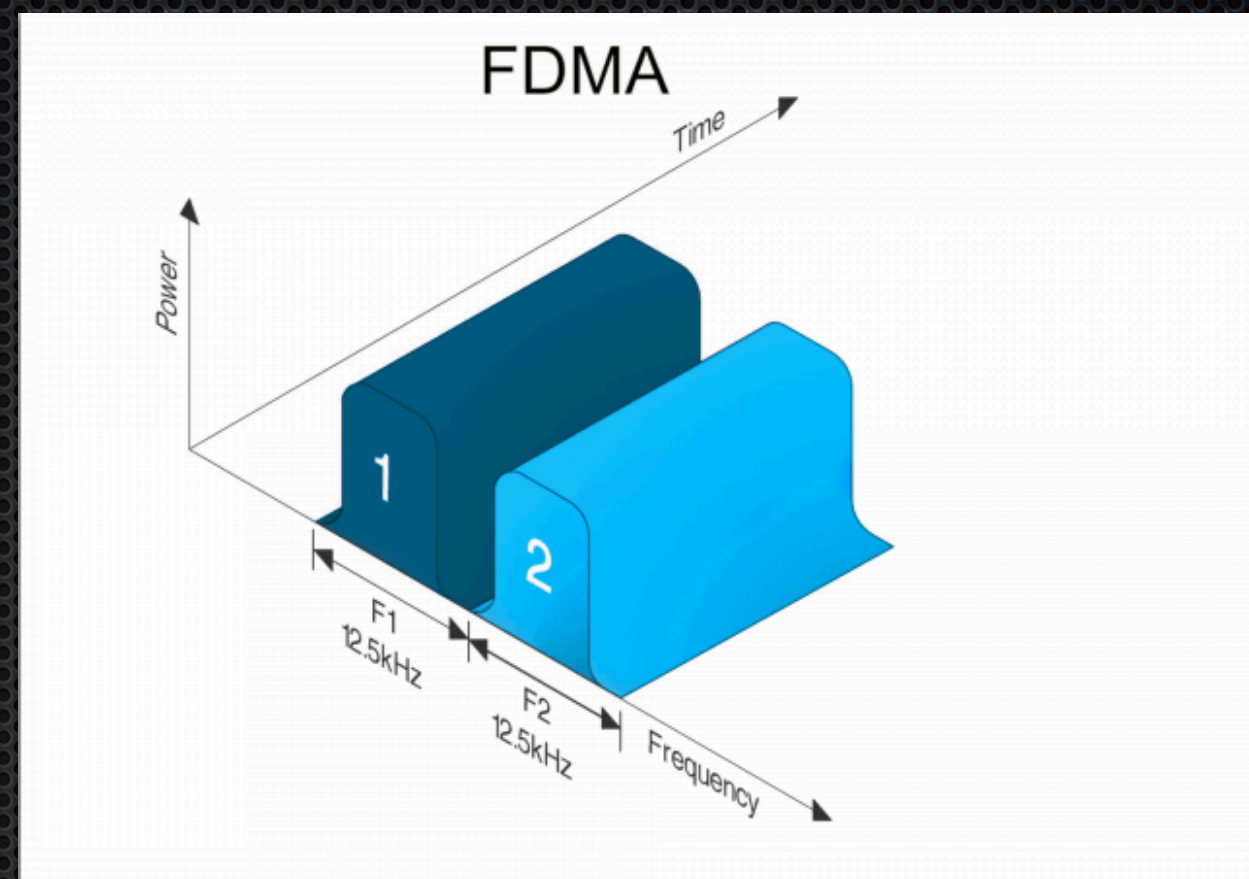

DMR
12.5 kHz
Channel Bandwidth

Half the Channel Bandwidth

DMR Bandwidth

TDMA vs FDMA

DMR Terminology

- ✦ DMR ID
- ✦ Talk Group
- ✦ Time Slot
- ✦ Color Code
- ✦ Code Plug

DMR ID

- ✦ An number that identifies you as a unique user on a DMR network.
- ✦ In most cases a person needs only one ID, two radios can share the same ID
- ✦ www.radioid.net

Talk Group

- ✦ A method of organizing radio traffic on a DMR network
- ✦ Talkgroups exist for countries, states, regions, cities, or special interests.
- ✦ The equivalent to a System Fusion Room or DStar Reflector.

Timeslot

- ✦ One of the two voice channels in the 12.5 kHz data stream
- ✦ A DMR repeater can handle two simultaneous conversations, one on Time Slot 1 and one on Time Slot 2.
- ✦ Repeater owners will assign certain talk groups to each time slot to best manage utilization.

Color Code

- ✦ DMR repeaters use color codes much like analog repeaters use CTCSS to minimize interference.
- ✦ Total of 15 different color codes.
- ✦ Color code 0 is the equivalent to open carrier.

Codeplug

- ✦ Program file loaded into a radio with frequencies, channel identifiers, talkgroups, etc.
- ✦ Antiquated term that's commonly used in commercial radio circles.
- ✦ The application used to program your radio is called the CPS or Customer Programming Software.

DMR Networks

- Brandmeister
 - Largest DMR Network
 - Bridged to Motorola and non-Motorola DMR repeaters
 - Wide MMDVM support
- DMR-MARC
 - Bridged Motorola repeaters
 - Limited MMDVM support
- DMR-Plus
 - Bridged Motorola and Hytera repeaters
 - Partners with DMR-MARC

DMR Handhelds

- \$75 and up, average cost \$150 - \$225
- TYT, Anytone, Retevis, Connect Systems, Hytera, Motorola
- Most models dual band with analog support.

DMR Mobiles

- \$300 and up
- Connect Systems, Retevis, Motorola
- Most models dual band with analog support.

DMR Hotspots

- Cost: variable
- Multi-Mode Digital Voice Modem (MMDVM)
- DVMega, SharkRF, etc
- DMR, DStar, Fusion, P25, NXDN support

Disadvantages of DMR

- ✦ More complex than amateur centric digital modes
- ✦ Difficult to dynamically join or monitor talk-groups
- ✦ Radio build quality all over the spectrum
- ✦ Another digital mode to choose from (Balkanization)
